

Legor Group S.p.A. · 4.U / C20

METALWORKING SPECIALISTS SINCE 1979

Legor Group is headquartered in Bressanvido, Italy

Customers who choose the Legor Group know they can rely on the reassuring stability of a multinational company, the technology and reliability of a “Made-in-Italy” product, the precision and timeliness of a local service anywhere in the world, underpinned by the tradition and support of specialization deriving from long-established sector presence. The Group has always espoused a philosophy of professional skills and networks to achieve its distinctive competitive edge. By making its production lines into divisions, Legor ensures maximum specialization backed up by its universal corporate know-how. Research and Development functions

are strategically located within the company and are used by all divisions, thereby generating synergies that produce leading-edge technology with optimized cost management. Innovation both of products and processes continues to be the Group’s core strength and is considered the basis for growth combined with essential understanding of local markets and customers. In order to develop new technologies and identify potential growth areas, the Legor Group works closely with academic and research institutions, as well as leading industrial partners on an international scale. In this way the Group can avail itself of competent

shared innovational strength that brings on-going introduction of new products to the market quickly and efficiently. The Legor Group is a benchmark presence in goldsmithing and the parallel markets that involve cutting-edge manufacturing methods like processing, machining, or finishing of precious and non-precious metals. Three of the four divisions are highly specialized, dedicated to the goldsmithing sector. The Master Alloy Division is the company’s core business, offering lines dedicated to transforming the metal from a raw material

to finished product, providing complete, detailed operational support for every different stage of the production process. The Plating Division typifies the dynamic nature of what is on offer in the sector of galvanic processes both for surface coating of jewellery and for protection (tarnish and scratch proofing, thickening) and decorative purposes, as well as in the production of dedicated equipment for each process. The Machinery and Tools Division offers a wide selection of top brands of machinery, tools and consumables.

HIGHLIGHTS —
1 The Plating Division of Legor Group offers a wide range of products for surface coating.
2 The Master Alloy Division is the company’s core business.....
